

## REACH-Certificate (1907/2006)

As a manufacturer of mechanical and electronic components for flow measurement, we are a downstream user (manufacturer of products) according to the REACH regulation.

According to information provided by our suppliers, the materials used by us do not contain substances from the SVHC candidate list or comply with the maximum permissible limit values.

The EU suppliers of materials that are processed in our products of relevant size are also obliged to inform us without being asked to do so, as long as the products they supply contain an SVHC substance above 0.1%. If we receive information from our suppliers and learn that our products exceed the 0.1 mass percentage threshold for an SVHC substance, we will inform you.

We make separate agreements with all non-EU suppliers of materials that are processed in our products on a relevant scale. In it, they assure in writing that we will be informed immediately if the 0.1 mass percentage threshold for an SVHC substance is exceeded in a product delivered to us.

Please understand that we cannot fill out any special questionnaires due to the huge increase in the number of inquiries. However, we hope that this letter contains the information you are looking for and we thank you for your trust and good cooperation.
